

SUR-94

- ▣ meter with universal input
- ▣ large 20 mm display
- ▣ 0, 2 or 4 relay outputs (or OC)
- ▣ RS-485 / Modbus RTU
- ▣ option: active current output

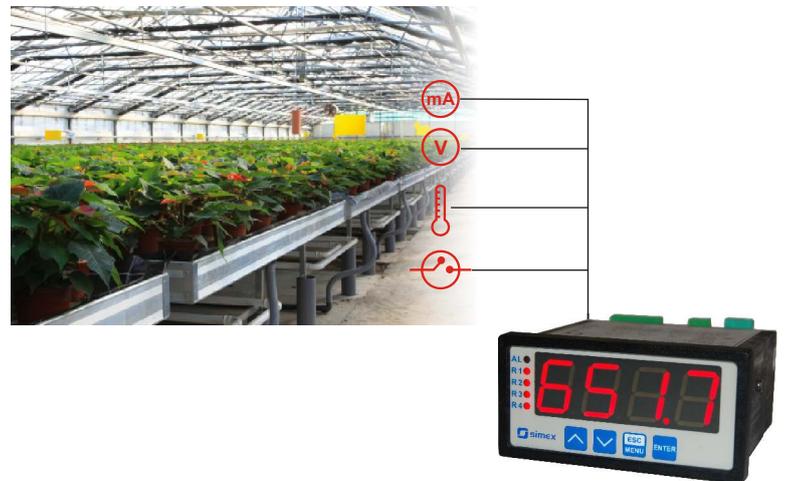

SUR-94 meter is equipped with one universal input, type: 0/4-20mA, 0-10V, 0-150 mV, Pt 100/500/1000 or TC (K, S, J, T, N, R, B, E). During the measurement process only one kind of input is available. Temperature of cold ends is compensated automatically. RTD and TC inputs are fully linearised. The device with current or voltage input operates in the following modes: linear, root, square and user defined (max. 20 points). Result is shown on 4-digit LED display. The device is equipped with RS-485/Modbus RTU communication interface and sensor supply output. 2 or 4 relay (or OC) outputs make it possible to adjust the level of the measured signal. These outputs can be controlled according to one or two threshold values. Optionally **SUR-94** with two relays outputs can be equipped with active current output. The device can be used for controlling and regulation of processes need proportional and threshold control like: temperature processes (heating or cooling), valves controlling or other.

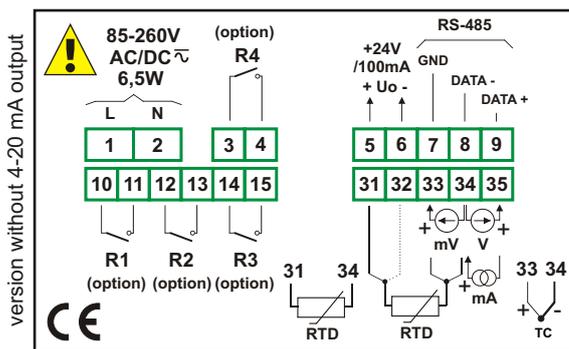

- programmable hystereses, delays of control outputs and indication filtration,
- automatic compensation of TC cold ends temperature,
- alarm diode and acoustic signal in case of exceeding of measurement range or sensor damage,
- peaks detection function.

Typical applications
